

Safetying The Trim Tab Hinge Pin

by Phil Duyck

Phil's method of retaining the trim tab hinge. The extra length of the hinge pin is bent in an "S" curve and inserted through a hinge eyelet. The eyelet is secured by a #8 screw into a nutplate riveted to the stab spar.

Our prototype builder Phil Duyck came up with a neat idea for safe tying the hinge pin of the trim tab but it does require a pin about two inches longer than the hinge.
